

Team members: Bryan Tan and Brian Hicks

Initial decisions: Python3 was our programming language, we used our own personal IDEs (Brian used PyCham, Bryan used Notepad++)

Task Log • Bryan: Use Pandas to merge list.txt and teachers.txt

- Brian: NR1-4
- Bryan: NR5
- Bryan: New tests
- Brian: Test debugging
- Bryan: Writeup

Code modification: Pandas was imported to merge the list and teachers tables

Interface modifications: Commands NR1-NR5 were added to the interface to represent the new requirements. NR5 outputs the requested data columns into a CSV file, the requested columns being GPA and the metric that is being analyzed in relation to GPA (grade level, teacher, bus, or all 3)
