

Team members: Bryan Tan and Brian Hicks

Initial decisions: Python3 was our programming language, we used our own personal IDEs (Brian used PyCham, Bryan used Notepad++)

Task Log

- Bryan: Input from student.txt in array format
- Brian: Main function command line interface
- Bryan: Info
- Brian: Average, searches by criteria
- Bryan: Tests and writeup, some reformatting for testing purposes
- Bryan: Readme file

Notes on Testing

There were some severe technical difficulties involving Python's mock object, which allows the user to redirect input and output streams to good places for testing. Additionally, tests found a bug with the grade

where it didn't provide enough information. Pretty simple task overall.
